DETAILED ACTION

Response to Remarks

1. Claims 4, 5, 10, 16, 17, 21, 27, 28, 33, 41, 42, 52, and 53 were objected to as being dependent upon a rejected base claim, but were indicated to be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims. The applicant has rewritten claims 4,10,16,21,27,33,41,42 and 52 in independent form.
2. The indicated allowability of claims 4, 5, 16, 17, 27, 28, 33, 41, 42, 52, and 53 is withdrawn in view of the newly discovered reference(s) to Wurtz (US 2004/0258253). Rejections based on the newly cited reference(s) would follow but the applicant agreed to an examiner's amendment. The examiner has determined that claims 4-6 and 16-18 are duplicate claims and claims 10 and 21 are duplicate claims. The applicant agreed to an examiner's amendment to resolve the matter.
3. Claims 1-3,6-9,11-15,18-20,22-26,29-32,34-40,43-51 and 54-66 are cancelled.

EXAMINER'S AMENDMENT

4. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Charles Hieken (Reg. No. 18,411) on 8/17/2007.

The claims are to be amended as follows:

Claims 4-5,16-17,21,27-28,33,41-42,52-53: CANCEL.

Allowable Subject Matter

5. Claim 10 allowed.

6. The following is an examiner's statement of reasons for allowance: Regarding claims 10, prior art Jones (US 6,118,878) discloses an active noise reduction headset comprising a headset circuit receiving an input voltage, a shutoff circuit (Figure 13, shutoff circuitry 1300), a power supply providing the input voltage to the headset circuitry (Figure 14), the power supply comprising a battery and voltage regulator, that the voltage supplied to the amplifier (1416) is adjusted according to the noise level which is in response to changes in headset load current drawn by the amplifier (column 20, line 12-column 22, line 16). Prior art Steinhagen et al. (US 6,255,901) discloses a demodulator for ASK-modulated signals having small modulation depth including a band-pass filter (18) whose output is compared to a threshold (column 1, line 55-column 2, line 8). Prior art Wurtz (US2004/0258253) discloses an automatic turn-on and turn off control for battery-powered headsets.

Regarding claims 10, the prior art or combination thereof fails to disclose or make obvious the invention as a whole, and in particular, an ANR circuit receiving a signal from a microphone positioned in an earcup and including a feedback loop to actively reduce the signal; a first voltage regulator limiting a voltage supplied to the ANR circuit

and to an amplifier to a first predetermined voltage; and a second voltage regulator limiting the input voltage of the headset circuitry to a second predetermined voltage.

The prior art or combination thereof fails to disclose or make obvious an active noise reduction headset system as claimed.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
